## **SUPER HUGE HEAT CUBE**

This is not your mother's oven! The Super Huge Heat Cube is a thermostatically controlled heating environment that warms tires evenly and consistently every time. The industrial grade heating element warms tires up to 200 degrees Fahrenheit while interior rollers constantly rotate the tires. No more hot spots, no more wrapping and plugging, just drop your tires in, set it and forget it. The Super Huge Heat Cube fits two late model stock car tires with ease and is built to last using Billet Aluminum construction with the finest electrical components.

## **THE SG1 (STYE AND GRIND) TIRE CHOCK**

It's probably the most loathed job in professional racing. Tire preparation quite literally is a pain in the neck. On your knees sweating over a stack of tires is no way to spend hours on a race weekend. The SG1 puts an end to all of that. Mount your wheel to the faceplate and let the machine do the hard work. The powerful electric variable speed motor rotates your tires at just the right speed. It's efficient, portable and fills your needs. Get off the ground and on the track with the SG1 Tire Chock.

## **TIRE MONSTER TIRE MACHINE**

A consistent tire is a fast tire. There is no better way to true, balance and contour your tires than the Tire Monster Tires Machine by Jones Motorsports. This variable speed tire lathe not only cuts the rubber from the tires but it allows operators to use templates for shape repeatability. No more guesswork, no more inconsistency. Make your tires fast every time. This is the machine for every Late Model, Top Fuel, Pro Stock and Funny Car driver. Like all of the Jones Motorsports product line, the Tire Monster is built to last using Billet Aluminum construction with the finest electrical components.
